

Gen-Z Mental Health & Physical Symptom Screening Algorithm

Adaptive weighted questionnaire based on mental and physical symptom clusters.

Step 1: Universal Mood Check

Scale: Never=0, Rarely=1, Sometimes=2, Often=3, Almost Always=4

Q1. How often does your brain decide it's Netflix time when there's actually work to do?

Q2. Do you ever feel like your mind has 37 tabs open and one is playing music but you can't find it?

Q3. How often do you wake up tired even after a full night's sleep?

Q4. Do you feel like everyone else has life figured out except you?

Q5. How often do you feel genuinely excited about your future? (reverse scored)

Branching Rule: Ask deeper questions when category score ≥ 5 .

Issue Modules

Academic Stress: deadlines, grades, overwhelm.

Anxiety: catastrophic thinking, panic, uncertainty.

Sleep Problems: late-night scrolling, insomnia, brain fog.

Burnout: exhaustion, detachment, loss of motivation.

Depression: hopelessness, low interest, emotional numbness.

Imposter Syndrome: feeling like a fraud, downplaying achievements.

Social Isolation: loneliness, invisibility, withdrawal.

Low Self-Esteem: self-criticism, comparison, fear of failure.

Each module contains 3 high-weight Gen-Z style questions scored 0–4.

Scoring Engine

Issue Score = $\Sigma(\text{response} \times \text{weight})$

Risk % = $(\text{Current Score} / \text{Maximum Possible Score}) \times 100$

0–24% = Chill (Green)

25–49% = Keep an Eye On It (Yellow)

50–74% = Needs Attention (Orange)

75–100% = High Risk (Red)

Safety Module

Triggered when depression/hopelessness scores are elevated. Includes questions about life worth, wishing to disappear, and self-harm thoughts for risk escalation.
